EXAMINER'S AMENDMENT

1. Claims 1-32 are allowed.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Joshua Liu Reg. No. 55,391 on July 19, 2005.

4. The application has been amended as follows:
5. In the Specification:
6. On page 1, line 5, enter the provisional application number --60/278,828-- and delete "(not assigned yet)"

In the Claims:

7. Cancel Claims 33-35.
8. Replace Claim 1 with the following:

A method of creating a network connection between an applet executing on a client computer and a content server computer, the method comprising:

determining a home site name for the applet, the home site name corresponding to a host name of a computer from which the applet was downloaded to the client computer;

checking for the presence of a hostname entry in a name directory on the content server computer, the hostname entry corresponding to the home site name for the applet;

permitting the applet to create a network connection with the content server computer if the hostname entry was present in the name directory on the content server computer; and

denying permission for the applet to create a network connection with the content server computer if the hostname entry was not present in the name directory on the content server computer.

9. Replace Claim 16 with the following:

A client computer system that executes an applet that was downloaded from an applet home site, the client computer system comprising:

a processor that executes programmed instructions; and a memory that stores a plurality of programmed instructions, including programmed instructions for an execution engine that executes the applet, the execution engine including network restriction software that, when executed by the processor, causes the client computer to:

receive a request from the applet to create a network connection with a content server computer;

check for the presence of a hostname entry in a name directory on the content server computer, the hostname entry corresponding to a name of the applet home site;

deny permission for the applet to create a network connection with the content server computer if the hostname entry was not present in the name directory on the content server; and

permitting the applet to create a network connection with the content server if the hostname entry was present in the name directory on the content server.
